

Yes, The World's Smallest Adhesive Light "NanoLite"

August 26th, 2008 by Tech

January Innovations

Sometimes [technology](#) innovates for the sake of innovation. Do you really need that widget to be 10x smaller and 10x faster? Then there are times when innovation comes forth to deliver a product that really helps address a need and eases daily frustrations. Welcome the NanoLite from January Innovations. This is the world's smallest adhesive light that allows you to easily see in the dark in a very convenient & practical fashion. It's a tiny light that can attach to any device like a car key so next time it's dark and you are struggling to put the key in the door you just press the tiny NanoLite and 'walla' instant visibility!

We have this and tried it out so impressed how easy it is to just stick on to any object like a small key. The cool thing is the NanoLite just fits anywhere and is not obtrusive at all. No assembly or tools needed to get this working just attach it to an object and go. The NanoLite beams a red light that allows you to see in the dark pretty well so removes the need for a bulky flashlight to just get basic light for simple needs in the dark.

Overall this is an innovative practical gadget and it's tiny size tells it all. For only \$2.99 a reasonable price to help alleviate the 'wish I had a light' situations.
