### Logitech diNovo Wireless Keyboard for Notebooks

Posted by admin on January 27, 2009 under [Home](#) | [Reviews](#) | [Be the First to Comment](#)

This keyboard has a very stylish look, and connects to any PC desktop or notebook via USB 2.0. This keyboard is very sleek, and gives you a sense of sophistication. The aluminum wrist rest is something rarely seen on a keyboard. Logitech claims that the keyboard will stay powered for three years... [continue reading here.](#)

### NanoLite

Posted by admin on under [Home](#) | [Reviews](#) | [Be the First to Comment](#)

The NanoLite is the world's smallest adhesive light developed by Arizona based January Innovations, Inc. No tools or assembly are required. Just pull off the adhesive protector and stick it on the key. It's that easy. Because of its small size and advanced 3M tm adhesive, NanoLite sticks to any size key. The NanoLite costs just \$2.99... ## NanoLite

**World's Smallest Adhesive Light**

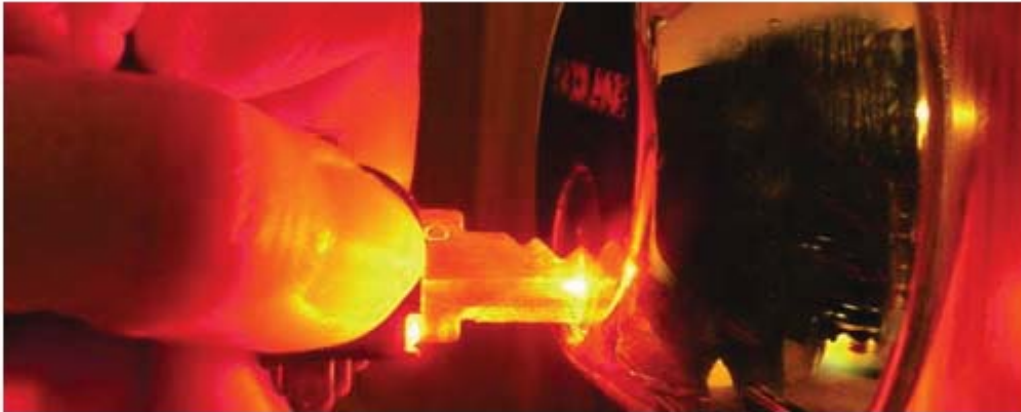

The NanoLite is the world's smallest adhesive light developed by Arizona based January Innovations, Inc. No tools or assembly are required. Just pull off the adhesive protector and stick it on the key. It's that easy. Because of its small size and advanced 3M tm adhesive, NanoLite sticks to any size key. The NanoLite costs just \$2.99 which is definitely worth it if you have used a keychain light just once in your life. I put the samples

provided on both of my keys and have already used them multiple times. You can read more about this clever product [here](#) at the product's home page.

## NanoLite Stick-on Key Light Review

## NanoLite Stick-on Key Light Review

by JULIE on FEBRUARY 10, 2009 · 0 COMMENTS

In CAR GEAR, GEAR

If you've ever found yourself fumbling around in the dark, trying to find a keyhole with a key, I have a tiny gadget just for you. It's the NanoLite from [January Innovations](#). It actually claims to be the world's smallest adhesive light. I've tried one for the past week. Let's see if it has managed to stay stuck and still lights my way.

The NanoLite is an individually packaged plastic stick-on light that requires no assembly or tools to 'install'. It was invented by special education [teacher](#) and mother Madeline Canfield of Scottsdale, Arizona.

The NanoLite is an individually packaged plastic stick-on light that requires no assembly or tools to 'install'. It was invented by special education [teacher](#) and mother Madeline Canfield of Scottsdale, Arizona.

They claim that it is the world's smallest stick-on light... As you can see, it's pretty dang small. The physical dimensions are 0.56" x 0.7" x 0.2" thick.

It is made of Black plastic with a recessed button on top and a Red LED on one corner. On the back is a peel and stick patch of 3M VHB (Very High Bond) tape adhesive.

It is made of Black plastic with a recessed button on top and a Red LED on one corner. On the back is a peel and stick patch of 3M VHB (Very High Bond) tape adhesive.

The LED is activated by pressing and holding the button on the top of the NanoLite. It has a lithium battery inside, with a shelf life of up to 10yrs and an operating life up to three years.

To install it, you just peel off the sticker from the back of the NanoLite and press it on to your key. It is suggested that you allow the adhesive set for 2hrs before using the light.

# the gadgeteer

I've been using the NanoLite on one of my keys for the past week or so. I keep my keys in my coat pocket and I wasn't sure that the NanoLite would stay stuck to the key due to rubbing against the other keys in my pocket. But after a week, it's still there... I even tried to pull it off, but gave up because I didn't want to destroy it. The adhesive is very strong and I don't think that little light is coming off any time soon.

You might be wondering why the NanoLite's LED is Red instead of a more typical bright White. It's because Red is supposed to be better for night vision. The beam is bright and Red or not, I doubt you'll have any trouble finding the keyhole when using it. The best thing about the NanoLite is that it doesn't require an extra hand to hold it like a more typical flashlight. You use the same hand holding the key to press the button as you insert it in the lock to open it.

The only thing I would like to see improved is the thickness of the NanoLite. As is, I wouldn't want to install them on all of my keys because it would make things pretty bulky.

All in all, the NanoLite is one of those simple products that causes a person to say "Why didn't I think of that?"

**Written by:** TheCelebrityCafe.com Staff

In a world, where smaller gadgets mean better and more advanced technologically, compared to the nearest competitor, it's only fair to apply this to all brands. We've seen it in iPods as they started off large and are now practically the size of a flea. Why not apply this to something as convenient as keys.

NanoLite is the world's smallest adhesive light. It was designed to solve problems of fumbling and dropping your keys in the dark. This is more than just any ordinary key chain light as you do not need two hands to operate. All you need is to point the key where you want and the light automatically illuminates. It's that simple; just push a small recessed button.

By using NanoLite, it will make opening doors a lot faster and safer.

Everyone has gone through the frustrating times when you're struggling to find the keyhole in the dark. So why not end the swinging temper turmoil and just add this to your key ring.

## NanoLite's Got It Right!

We've all been there before -- trying to fit our key into a pitch black keyhole. Pick car or house, it's still a pain **fumbling in the dark** to get that darn key in there!

**NanoLite** to the rescue!

The **world's smallest adhesive light** (0.56" X 0.7" and 0.2" thick), it easily adheres to keys or any other flat surface and can be activated simply by pressing a small recessed button, which radiates a small but bright light.

No tools or assembly are required. Just pull off the adhesive protector and stick it on the key ... it's that easy.

Unlike old fashioned key chain lights that require two hands to operate, NanoLite **automatically shines where your key is pointing**. One hand operation means no more fumbling when you're hands are full carrying groceries, tools or children. With NanoLite you'll have **faster, safer entry** into your car, house or anyplace else.

MSRP: \$2.99

## Yes, The World's Smallest Adhesive Light "NanoLite"

August 26th, 2008 by Tech

January Innovations

Sometimes [technology](#) innovates for the sake of innovation. Do you really need that widget to be 10x smaller and 10x faster? Then there are times when innovation comes forth to deliver a product that really helps address a need and eases daily frustrations. Welcome the NanoLite from January Innovations. This is the world's smallest adhesive light that allows you to easily see in the dark in a very convenient & practical fashion. It's a tiny light that can attach to any device like a car key so next time it's dark and you are struggling to put the key in the door you just press the tiny NanoLite and 'walla' instant visibility!

We have this and tried it out so impressed how easy it is to just stick on to any object like a small key. The cool thing is the NanoLite just fits anywhere and is not obtrusive at all. No assembly or tools needed to get this working just attach it to an object and go. The NanoLite beams a red light that allows you to see in the dark pretty well so removes the need for a bulky flashlight to just get basic light for simple needs in the dark.

Overall this is an innovative practical gadget and it's tiny size tells it all. For only \$2.99 a reasonable price to help alleviate the 'wish I had a light' situations.
